

Parity Software's

Mobile Warehousing

Overview

Parity Software's Mobile Warehousing addresses the critical business need for fast accurate and efficient flow of stock through a warehouse. Achieve a higher level of operational efficiency and control through the use of mobile technology. This technology will enable quick and accurate real-time information between warehouse management, financial/ERP systems and operators of warehouse processes.

Business Issues

Many businesses have the following issues in their warehouse:

- Stock shrinkage
- Large timing and financial differenced between theoretical and actual stock at any point in the month
- Challenges of tracking stock to a specific location or bin in the warehouse
- Inaccurate and inefficient movement of stock within the warehouse
- Slow and inaccurate paper based stock take processes
- Challenges regarding performance of warehouse staff

Features

- Barcode management at item or unit of measure level including printing and barcode scanning
- Warehouse processes can be initiated by mobile warehouse users or ERP system transactions
- Mobile stock take with cyclical stock take and recounting options such as blind counts and double blind counts
- Automated stock replenishment from bulk storage to fine picking areas
- Simple functional interfaces designed for ease of use by blue-collar warehouse staff
- Quick and easy installation and integration into ERP systems
