

Parity Software's Price Matrix

Overview

Parity Software's Price Matrix meets the critical business issue of fast and efficient inventory pricing control.

Price Matrix allows the User to specify prices and discounts based on Debtors, Items, Debtor Classes, Item Classes or Price Groups that are setup within Microsoft Dynamics GP. Prices can be determined using Gross Profit percentages, markups and markdowns based on either the cost or list price. Price Matrix provides proven flexible pricing models.

Features

- Item pricing that is based on date ranges, units of measure, quantity breaks and currency
- Price Lists can be created for selected items and customers or linked to hierarchical customer groups
- Links to the Telesales module, enabling the user to determine the last price at which an item was sold to a customer
- Multiple date ranges can be set up for pricing based on contracts and volume-based

deals

- Price Matrix provides many ways of managing pricing giving the user sophisticated pricing control of inventory

Business Issues

Many businesses require more sophisticated and flexible methods of pricing for Sales Order Processing documents, as well as easy management of these pricing methods.
