

Parity Software's Stock Take

Overview

Parity Software's Stock Take meets the critical business issue of the fast and efficient processing of a stock count.

Stock counts can be done by Site ID, ABC Code, Item Class, Item Number, Generic Description, Description, Item Type, Next Stock Count Date or any combination of these. By entering a range, the stock count can be broken down into manageable parts.

Features

- Has the ability to add "found items" to the count.
- Allows the User to view any pages that haven't been captured
- Allows the User to filter the items in the stock count for easy viewing and capturing
- Prints a report that displays the pages that are missing from the stock count

Business Issues

Many businesses require an efficient stock take with the minimum of processing time. Because Stock Take has the ability to allow the user to view one stock count page or item at a time, the processing is quicker.

Item	Description	Quantity	Unit	Cost	Value	Stock	Page
10000	10000	10000	10000	10000	10000	10000	10000
10000	10000	10000	10000	10000	10000	10000	10000
10000	10000	10000	10000	10000	10000	10000	10000
10000	10000	10000	10000	10000	10000	10000	10000
10000	10000	10000	10000	10000	10000	10000	10000
10000	10000	10000	10000	10000	10000	10000	10000
10000	10000	10000	10000	10000	10000	10000	10000
10000	10000	10000	10000	10000	10000	10000	10000
10000	10000	10000	10000	10000	10000	10000	10000
